                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1, Application US/09833102

Patent No. US20020006652A1

GENERAL INFORMATION:
APPLICANT: Danielsen, Steffen
APPLICANT: Schneider, Palle
TITLE OF INVENTION: Nucleic acids encoding polypeptides having haloperoxidase activit
CURRENT APPLICATION NUMBER: US/09/833,102
CURRENT APPLICATION NUMBER: 0.01-04-11
NUMBER OF SEQ ID NOS: 2
SOFTWARE: PatentIn version 3.0
SEQ ID NO 1
LENGTH: 1797

## gb_gss2:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Madical
Science: Lissue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CTTGCTGCTCTAAAGGTGGG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  / Lissue type="blood"

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; tissue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sugs (CTTGGCTGAAAAGCTGGG).

	science; tissue and kNA were prepared in the Department of Large Animal Medicine, University of Georgia; sequencing done in the
	Laboratory for Genomics and Bioinformatics, University of Georgia.
	Phred quality 16. Three-prime sequences are presented as their
	reverse complement and have been trimmed to exclude polyA.

Animal Medicine, University of Georgia; sequencing done in the Liaboratory for Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA. Seq primer: Sugs (CTTCTGCTTAAAAGCTGCG).

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; issue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.

/clone_libe_cSn 1 S neurona invitro merozoite cDNA"
/clone="Vector: pBluescript SK-; Site_1: EcRI; Site_2:
Xho1; The library was constructed by Dan Howe, University
of Kentucky. cDNAs were synthesized from poly(A) + RNA
by oligo d(T) priming and directionally cloned into the
Uni-zAP KR lambda vector. The library was mass excised
as phagemids and rescued in SOLR cells. The plasmid
library was recovered from the SOLR cells and transformed
in mass into DH10B cells for sequencing. WARNING: the
library contains a small percentage of cDNAs derived from
the bovine host cells."

Computational Analysis of Full-Length Mouse cDNAs Compared with
Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to
prepare full-length cDNA libraries for rapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format
sequencing pipeline with 384 multicapillary sequencer. Genome Res.
10 (11), 1757-1711 (2000)
Computer-based methods for the mouse full-length cDNA
encyclopedia real-time sequence clustering for construction of
nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
CDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in Riken
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues
Tissues were provided by Hiromitsu Nakauchi (Dept. of Immunology
Institute of Basic Medical Sciences University of Tsukuba 1-1-1
Tennodai, Tsukuba, Labraki 305-8978 ) whose assistance we gratefully

                                                              The present invention describes a Babesia canis associated protein (I), comprising a Beviri's protein of 15 kD molecular weight (MW) and having a sequence of at least 80% homology to a sequence (ABP53714) of 141 amino acids, or a Beviri2 protein of 32 kD MW and having a sequence of at least 80% homology to a sequence (ABP53716) of 285 amino acids, or their immunogenic fragments. (I) have antiparastitic and immunostimulant activities, and can be used in vaccines. (I) can also be used for the preparation of a vaccine for combaing B. canis infections. (I) is also useful in a diagnostic test for the detection of antibodies against B. canis associated antigenic material. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Babesia canis, Bcvir15, 15kD protein, Bcvir32, 32kD protein, infection, antiparasitic, immunostimulant, vaccine.

a sequence of at least 80% homology to a sequence (ABP53714) of 141 amino acids, or a Bcvir32 protein of 32 kD MW and having a sequence of at least 80% homology to a sequence (ABP53715) of 285 amino acids, or their immunogenic fragments. (I) have antiparasitic and immunostimulant activities, and can be used in vaccines. (I) can also be used for the preparation of a vaccine for combating B. canis infections. (I) is also useful in a diagnostic test for the detection of antibodies against B. canis associated antigenic material. The present sequence represents Bcvir32 from the present invention.
